ASSIGNMENT NO 01

Qno 16

Bank Service Fees:

Sol:

```
#include <iostream>
using namespace std;
int main() {
    double balance;
    int checks;
    cout << "Enter beginning balance: $ ";
    cin >> balance;
    cout << "Enter number of checks written: ";
    cin >> checks;
    double fee = 10.0;
    double checkfee = 0;
    if (checks < 20) {
        checkfee = checks * 0.10;
    }
    else if (checks < 40) {
        checkfee = checks * 0.08;
    }
```

```

else if (checks < 60) {
    checkfee = checks * 0.06;
} else {
    checkfee = checks * 0.04;
    double extrafee = 0;
    if (balance < 400) extrafee = 15.0;
    double total = fee + checkfee + extrafee;
    cout << "Total service fee: " << total << endl;
    return 0;
}
}

```

Qn: 17 Head Phone Price:

Sol:

```

#include <iostream>
using namespace std;
int main() {
    int choice;
    cout << "1. Noise cancelling - $249.00" << endl;
    cout << "2. Wireless - $199.00" << endl;
    cout << "3. Wired Budget - $49.00" << endl;
    cout << "Enter your choice: ";
    cin >> choice;
    if (choice == 1) {
        cout << "Price: $249.00" << endl;
    } else if (choice == 3) {
        cout << "Price: $49.00" << endl;
    } else {

```

```
cout << "Invalid choice" << endl; }  
return 0;  
}
```

Qno 18 Health Club Membership

Sol:

```
#include <iostream>  
using namespace std;  
int main() {  
    int choice, month;  
    double rate, total;  
    cout << "1. Standard Adult - Rs 40 / month" << endl;  
    cout << "2. child - Rs. 30 / month" << endl;  
    cout << "3. Senior citizen - Rs 20 / month" << endl;  
    cout << "4. Quit" << endl;  
    cout << "Enter choice (1-4): ";  
    cin >> choice;  
    if (choice == 4) {  
        cout << "Exiting ----" << endl;  
        return 0;  
    }  
    if (choice == 1)  
        rate = 40.0;  
    else if (choice == 2)  
        rate = 20.0;  
    else if (choice == 3)  
        rate = 30.0;  
    else {
```

```

cout << "Invalid!" << endl;
    return 0; }
cout << "Enter no of month: ";
cin >> month;
total = rate * month;
cout << "Total amount to pay: Rs" << total << endl;
    return 0;
}

```

Q No 14 Mobile Data Plans

Sol:

```

#include <iostream>
using namespace std;
int main () {
    int Pkg;
    double gb, total;
    cout << "Enter the package purchased (1, 2, or 3): ";
    cin >> Pkg;
    cout << "Enter the number of gigabytes used: ";
    cin >> gb;
    if (Pkg == 1) {
        total = 39.99;
        if (gb > 4) total = (gb - 4) * 10;
    }
    else if (Pkg == 2) {
        total = 59.99;
        if (gb > 8) total = (gb - 8) * 5;
    }
}

```

```

else if (pkg == 3) {
    total = 69.99;
}
else {
    cout << "Invalid Package !" << endl;
    return 0;
}
cout << "The total amount due is: $"
    << total << endl;
    return 0;
}

```

Q No 20 Seconds Converter

Sol:

```

#include <iostream>
using namespace std;
int main() {
    long long seconds;
    cout << "Enter no of seconds: ";
    cin >> seconds;
    if (seconds >= 86400) {
        cout << seconds / 86400 << " day(s)" << endl;
    }
    else if (seconds >= 3600) {
        cout << seconds / 3600 << " hour(s)" << endl;
    }
    else if (seconds >= 60) {
        cout << seconds / 60 << " minutes" << endl;
    }
    return 0;
}

```
